

LTspice IV Is Now Native on Mac OS X

MILPITAS, CA – November 4, 2013 – Linear Technology Corporation announces a native Mac OS X release of its popular LTspice® IV simulation program. This new release of LTspice supports Mac OS X 10.7+ platforms and has similar capabilities and features as its Windows counterpart.

LTspice IV is a fourth generation SPICE simulation program from Linear Technology. The program consists of a high performance SPICE simulator that greatly improves the simulation speed of circuits such as a Switch Mode Power Supply (SMPS) while maintaining accuracy. The program also contains an integrated schematic capture program, enabling users to create and edit circuits, plus an integrated waveform viewer to analyze simulation data. Included with LTspice IV is an extensive database of macromodels for Linear Technology's devices and many passive components. LTspice IV is node-unlimited and third party models can be imported easily.

About Linear Technology

Linear Technology Corporation, a member of the S&P 500, has been designing, manufacturing and marketing a broad line of high performance analog integrated circuits for major companies worldwide for over three decades. The Company's products provide an essential bridge between our analog world and the digital electronics in communications, networking, industrial, automotive, computer, medical, instrumentation, consumer, and military and aerospace systems. Linear Technology produces power management, data conversion, signal conditioning, RF and interface ICs, µModule® subsystems, and wireless sensor network products. For more information, visit www.linear.com.

 , LT, LTC, LTM, Linear Technology, the Linear logo, µModule and LTspice are registered trademarks of Linear Technology Corp. All other trademarks are the property of their respective owners.
